Project Details:

In this project, we have a chemistry application that focus on enhancing the learning of the periodic table in an interactive manner. Our application allows users to access information about individual elements, explore specific periodic table properties like element groups and radioactivity, and offers a valuable resource for students, instructors, or anyone who want to learn the periodic table. Additionally, we are planning to integrate basic quiz features to test and reinforce users' knowledge of the periodic table. We are planning to implement the graphical user interface (GUI) with Qt framework.
